

Electrical Transfer Plate HURT LIFT

Mercedes Benz GLE

Using the lifting mechanism

High van Mercedes Benz V,
leather cover plate.

Higher passenger car Renault Captur.

Application for lifting from seat to stand,
AUDI A6.

- **Multi-purpose mechanism** that can be used in more applications: lifting transfer desk, sit-to-stand aid (myopat).
- Depending on the purpose we manufacture the end part which we prepare as needed, or you can finalize yourself.
- The mechanism is attached to the central body column.
- Very small installation dimensions, particularly **small thickness**.
- We can prepare stroke length of the device as needed. Standard **stroke lengths** are 270 and 435 mm. The Lower stroke lift is sufficient for most passenger cars, the higher stroke lift for vans.
- The overall dimensions are: height 470/635, width 123, thickness 48 mm.
- We are able to adapt your specific requirements or the specifics of your market.
