

Swivel Seat Turn Base

- We can prepare a universal turn base according to specific requirements of the customer.
- The seat base has passed a tensile test at the TÜV test room.
- Under certain circumstances, we can prepare a turn base for a specific type of car with an original design of cushion.
- We usually adjust and install original car seats. Of course, universal seats can be used.
- During rotating the base makes extra forward movement so it copies the body pillar, thereby the most space for legs is provided.
- Thanks to extra rails the swivel passenger seat can also be slid out after its turn.
- Automatic locking in end positions.
